TruPrint 1000

Build volume (cylinder): \varnothing 100 × H 100 mm

Maximum laser power at the workpiece

(TRUMPF fiber laser): 1 × 200 W

Multilaser option: 2 × 200 W

Beam diameter: 55/80 μ m

TRUMPF Laser- und Systemtechnik AG · Johann-Maus-Strasse 2 · 71254 Ditzingen

Multiplate option: Easily coping with high orders

- Benefit from a longer machine runtime without manual intervention
- The TruPrint 1000 accommodates up to four substrate plates in the build cylinder
- The substrate plate can be changed automatically without interrupting the build process
- Maximum productivity, resulting in time and cost savings

Preform option: Efficient production of individual abutments

- Precise and fast production of individual abutments
- Reduced part costs as only the patient-specific portion is printed
- Up to 64 individual abutments can be printed on one preform
- No support structures are needed
